Where to Go?

Installation instructions

1. Download IntelliJ 14: https://www.jetbrains.com/idea/download/
2. Select File -> Open and navigate to the project folder on your machine 'WorldStatus'
3. Run MainActivity.java (the project should run this activity by default)
4. Select a running device or an emulator to run the app on
5. The application is now ready to use

Dependencies

The only dependency is achartengine.jar and we use that to draw graphs for data visualization.
